PROFESSIONAL SUMMARY

Full stack developer who ships production web applications end to end, from React front ends to PostgreSQL data layers, authentication, and third party payment integrations. Sole developer of a live commerce platform on React, Supabase, and the Square Checkout API delivering 3 role-scoped interfaces, checkout, admin tooling, and automated transactional email. Holds 2 concurrent remote contracts and is available for full time work.

TECHNICAL SKILLS

Languages: JavaScript, Python, Java, SQL, HTML5, CSS3

Frontend: React, Next.js, Vite, Tailwind CSS, component architecture, responsive design, REST API integration

Backend and Data: Node.js, Supabase, PostgreSQL, Edge Functions, Supabase Storage, relational schema design, authentication, row level security

APIs and Integrations: Square Checkout API, webhooks, Resend email API, WordPress REST API, Advanced Custom Fields, Google Analytics

Tools and Platforms: Git, GitHub, Vercel (CI/CD), WordPress, LocalWP, PyGame

PROFESSIONAL EXPERIENCE

Full Stack Developer (Contract), TireDash Mobile, Pickering, ON (Remote)

June 2026 - Present

- Architected and shipped the company web platform end to end as the only engineer, delivering 3 role-scoped interfaces (customer storefront, worker panel, admin panel) on a React, Vite, Tailwind CSS, Supabase, and Vercel stack configured from scratch.
- Built authentication and role based access control across 2 internal panels with Supabase Auth, implementing login, session handling, and row level security policies so each role reads and writes only the records it owns.
- Designed and administered the customer PostgreSQL database from an empty schema, covering relational modeling, row level security, and account management for customer profiles, credentials, and booking history.
- Engineered the complete checkout flow and integrated the Square Checkout API, handling payment sessions, webhook confirmation, and order state transitions across every step from cart to completed transaction.
- Shipped an admin controlled flash sale toggle that applies promotional pricing across the storefront and checkout in real time, cutting a promotion launch from a developer deploy to a single click.
- Automated 100 percent of customer facing email on Resend and Supabase Edge Functions with capacity for 3,000 transactional messages per month, covering contact form routing, booking confirmations, and notifications, and provisioned the company branded domain email system.

Frontend Software Engineer (Contract), 8Forge Studios, New York, NY (Remote)

April 2025 - Present

- Develop and maintain client web applications in Next.js and React across multiple agency projects, standing up local development environments and shipping features against production WordPress backends.
- Integrate headless WordPress content into React front ends through the WordPress REST API and Advanced Custom Fields, exposing structured content as consumable data for the application layer.
- Reduced the duration of a statistics animation sequence by 75 percent on the STFRD client site through dynamic offsetting, preserving the perceived speed of the effect.
- Rebuilt animation playback logic with viewport aware triggering, eliminating repeat playback on scroll re-entry and resolving unintended video playback behavior.
- Exposed 7 new configurable WordPress options to the client, removing developer involvement from routine content and layout changes.

PROJECTS

XBACAB Space Shooter, Python and PyGame, 2025

- Built a complete 2D space shooter in 3 days, implementing 4 gameplay systems (boss encounters, power-ups, an in-game shop, and persistent upgrades) on a custom game loop with collision detection and menu, combat, and progression state management.

EDUCATION

New York Institute of Technology, New York, NY | B.S. Computer Science, Specialization in Artificial Intelligence, Expected 2028

Completed Coursework: Data Structures, Operating Systems, Computer Networks, Database Management, Computer Organization and Architecture, Discrete Structures, Digital Logic Design, Computer Programming II

Archbishop Molloy High School, Queens, NY, 2025
